Projects

- **System Integration And API Testing**
  Client:- WM Morrisons Supermarket LTD
  Domain :- Retail

Description :- Morrisons supermarkets is UK based wholesale retail company, is using a web application for creating and shipping orders for customers. It has different modules such as creating order for different customers, invoicing order, fetching details of customer through
Get request, Post request etc ,Getting details of the order through Database etc. It is an effective web application specifically designed to fulfill various requirements in managing customer order details.

Responsibility:
- Requirement gathering and requirement   analysis
- Generating test reports
- Used Postman and Putty for Front-end Testing.
- Validating DB details with API details.
- Used AWS for getting the details from invoice file and by running AWS tasks.
- Used GCP and PostgreSQL for getting data from DB.

- **Frontend Developer**
  Client:- WM Morrisons Supermarket LTD
  Domain :- Retail

  Responsibility:
  - Changing the complete User Interface from javascript to React js.
  - Fetching API data which contains customer's orders details, items details as well as inventory details in webpage in row and columns format.
  - Managing the rows and columns such that we can able to edit those columns.
  - Work on *pagination page* creation in order to get clean interface.
  - *Bootstrap Table* is mainly used to manage all the rows and columns, and downloading the table in .CSV format.
  - Working on defect management and Bug tracking using *Jira tool*.
  - Working on creation of Low Level Design and High Level Design of client's requirements.

Declaration

- I hereby declare that all the information given above is true and correct to the best of my knowledge.

Hands On Project

- **Portfolio Access through User Login Page**
  A portfolio has been created using React Js which contains my all details.
  Before navigating to Portfolio, first we have to register with our Name, Email and password.
  All the details will be stored in our local storage.
  Then after login with the correct details, we can only navigate to the Portfolio page, otherwise it will alert us as Invalid details.
  For collection the details of the user in array form, useState functions has been used.
  All the styling are applied using Tailwind CSS.
  Inside the portfolio page, there is a skill section, which has been designed using *React-Circular-Progressbar* .
  There is also one Download CV button available in the Home Div, after clicking on the that button, CV will be downloaded in pdf format.
  In the last of the portfolio page, Contact Section is available, where anyone can send the messages and that message will reached to me.
  This functionality, I have been created using *Email js.*

  And also one Logout button is present in Navbar section. So after clicking on logout, we will again navigate to Login Page.

  With the help of *ProtectedRoute*, I restricted direct access to the Portfolio page without login.

- **ECommerce Website using Redux**
  An ECommerce website has been designed using ReactJs using different dependencies such as react-redux, reduxjs/toolkit, Email js, react-router-dom, Tailwind-CSS.

This website collect the product details from an API to display the data.
Hooks method such as *useState* and *useEffect* has been used to store the details and fetch API respectively.
There is a seperate category section which helps to categorise products in different sections.
Redux method has been used to *add/remove* the product inside the cart.
